

Contents

1	Introduction	1
1.1	The Book Structure and Technical Notes	3
1.2	An Overview of the Kingdom of Larsa, Past and Present	7
1.2.1	The Trouble with Chronology	8
1.2.2	The City of Larsa, Its Environs and Modern Archaeology	9
1.3	Current Trends in Assyriology	10
1.3.1	Archival Studies	10
1.3.2	Unity Out of Variety	12
1.3.3	Archives and the Parameters of Study	16
1.4	Mistakes and Errors—Preliminary Remarks	16
2	The Early Scribal Education	21
2.1	Systems of Quantification	22
2.1.1	Measurement Systems	23
2.1.2	Bridges and Other Connections Between Metrological Systems	27
2.1.3	Numerical Systems	28
2.2	Elementary Education in the Old Babylonian Period	34
2.2.1	Tablet Types	35
2.2.2	Metrological Lists and Tables in the Scribal Curriculum	41
2.2.3	Numerical Tables and Elementary Education	52
2.3	Conclusions	57
3	Text Types and Archival Practices in the Kingdom of Larsa	59
3.1	Text Layout and Structure	62
3.1.1	Tabular and Prosaic Layout	62
3.1.2	Single Transactions	65

3.1.3	Lists	67
3.1.4	Balanced Accounts	74
3.2	Conclusions	79
4	Archives, Bureaus and Management Systems in the Kingdom of Larsa	81
4.1	The Grain Storage Bureau	84
4.2	The Bureau of Irrigation and Excavation	92
4.3	Grain Harvest Archive	97
4.4	Grain Production Archive(s)	97
4.5	Conclusions	98
5	Metrology and Sexagesimal Place Value Notation in Economic Texts	101
5.1	The Transparency of Economic Texts	103
5.2	Possible Sexagesimal Place Value Notation Basis for Calculations	107
5.3	Explicit Statements of Sexagesimal Place Value Notation	114
5.4	Conclusions	117
6	Errors, Mistakes and Evidence for a Counting Device	121
6.1	The Nature of Discrepancies	123
6.2	An Abacus?	125
6.2.1	Carrying in Other Texts	126
6.2.2	Evidence for Addition in Mathematical Texts	128
6.2.3	Abacus and Administrative Practice	130
6.3	Conclusions	134
7	Observation and the Limits of Numeracy	139
7.1	Breakdown of Trust and the Practice of Oversight	141
7.1.1	The Uniformity of Measurements and Measurement Values	143
7.1.2	Standard Variation	144
7.1.3	Changing Standards and Value Assessments	150
7.2	Measurement Inconsistency and Grain Transit	155
7.3	Production and Conception of Value	162
7.3.1	Below the Lower Limit: The Expert	164
7.3.2	Below the Lower Limit: The Novice	168
7.4	On Measurement Theory and Practice	169
7.5	Conclusions	171
8	Multiplication and Estimation	177
8.1	Revenue Rates	178
8.2	Equivalencies	185

8.2.1	Do Equivalencies Reflect a Calculation?	186
8.2.2	Equivalencies in the Mathematical Tradition	189
8.2.3	Equivalencies and Discrepancies	191
8.3	Estimation, Observation and Labor	199
8.3.1	Volume, Labor and Wages in Economic Texts	200
8.3.2	Volume, Labor and Wages in the Mathematical Tradition	201
8.3.3	Sexagesimal Place Value Notation, Volume and Labor	204
8.3.4	Sexagesimal Place Value Notation, Volume and Scribal Practice	208
8.3.5	Volume as an Observation of Labor	211
8.3.6	Labor as a Statement of Wages	215
8.4	Tabular Layout and Economization of Practice	221
8.5	Conclusions	224
9	Rounding in Mathematical and Economic Texts	229
9.1	Truncation of Measured and Calculated Values in Administrative Texts	234
9.2	Other Examples of Rounding Down in the Economic Texts	236
9.3	Rounding up in the Economic Texts	238
9.4	Rounding and Multiplication	241
9.5	Rate Approximations and the Uncertainty of Interpretation	242
9.6	Conclusions	245
10	Conclusion: On Errors, Rounding and Education in the Kingdom of Larsa	249
	Appendix 1: Texts	259
	Appendix 2: Numeracy by Scribe	349
	Appendix 3: Metrological and Numerical List and Table Catalogue	391
	Appendix 4: Price and Wage Index and Charts	407
	Appendix 5: Discrepancy Index	427
	Bibliography	441
	Indexes to the Text Editions	453
	Part I Akkadian and Sumerian Word Index	455
	Part II Name Index	469
	Part III Economic Text Index	475
	Part IV Mathematical Text Index	479
	Subject Index	481
