

Erika Lorraine Milam

Looking for a few good males: female choice in evolutionary biology

Introduction

1. Beauty and the beast: Darwin, Wallace, and the animal-human boundary

2. Progressive desire: rational evolution after the great war

3. Branching out, Scaling up: American experiments on behavior

4. Courtly behavior: the rituals of British zoologists

5. A science of rare males: the genetics of populations in the long 1960s

6. Selective history: writing female choice into organismal biology
